Easy_EnglishPassage_1007
Protecting Environment for a Better Future

Words: 714, Characters: 4597 **LEVEL: EASY**

Environment and nature play a vital role in the survival and development of all living 86
beings on earth because clean air pure water fertile soil and green plants are 165
essential for life every person should understand that protecting the environment is 250
not only the responsibility of governments but also of each individual human being the 337
forests provide oxygen absorb carbon dioxide and prevent soil erosion rivers and 418
lakes give fresh water to humans animals and plants the mountains control the 496
climate and protect biodiversity pollution deforestation and excessive use of natural 582
resources are the major threats to our environment if we cut down trees without 662
planting new ones the balance of nature will be disturbed and climate change will 744
increase cities are becoming hotter because trees are being removed and concrete 825
buildings are increasing global warming is another serious problem caused by the 906
emission of harmful gases from vehicles industries and factories protecting the 986
environment means reducing waste recycling materials planting trees using public 1067
transport and avoiding unnecessary burning of fossil fuels schools and colleges also 1152
teach students about the importance of nature because children who understand 1230
these values from an early age grow up to be responsible citizens wild animals and 1313
birds also depend on forests rivers and grasslands for survival when humans destroy 1397
these habitats many species become endangered or extinct every small action counts 1480
for example if every person saves water uses electricity wisely and avoids plastic 1563
pollution the earth will remain clean and healthy for future generations governments 1648
around the world are creating laws to protect natural resources but the cooperation 1732
of society is equally important people should also be aware of climate change and take 1819
steps to reduce carbon footprints by walking cycling using solar energy and planting 1904
more trees parks gardens and green belts in cities also help in maintaining the 1984
ecological balance and provide a place for recreation and relaxation spending time in 2070
nature improves mental health reduces stress and increases creativity in conclusion 2154
environment and nature are priceless gifts for humans and all living beings if we 2236
respect and protect them we can enjoy a healthy happy life if Environment and nature 2321
play a vital role in the survival and development of all living beings on earth because 2409
clean air pure water fertile soil and green plants are essential for life every person 2496
should understand that protecting the environment is not only the responsibility of 2580
governments but also of each individual human being the forests provide oxygen 2659
absorb carbon dioxide and prevent soil erosion rivers and lakes give fresh water to 2743
humans animals and plants the mountains control the climate and protect biodiversity 2828
